

Where do the dangers lie?
How do you protect yourself?
Is your piece of cyberspace secure?

Awareness

Be Cyber Savvy with C-SAFE

Increase Your Awareness of Internet Security

Become aware of the dangers surrounding you on the Internet. You can do this through formal training, or simply keeping up with the latest Internet news and alerts.

Rules

Be Cyber Savvy with C-SAFE

Rules

- Adopt a plan for computer use in your home or business
- Decide how secure you need to be
- Get all family members or employees involved for the best security

176

Finally: remember...

- Hackers want to use your computer to attack, not just you, but others as well
- Remember to use several counter-measures: anti-virus, anti-spyware, patches, firewalls, backups
- Keep private information private; be wary of emails and websites that ask for your personal information
- Use a strong password and be sure to keep it safe
- Secure your wireless network
- *Social Engineering works!*

180

Best Practices

Use anti-virus software

Install hardware and software
firewalls

Check the security settings in
your email client and web
browser

**For more information go to
www.SecureFlorida.org**

Maintain up-to-date security
patches

Establish policies and rules for
information security

Use password protected screen
savers
